

AI Usage Log

Sprint 1

Mohamad Alost (40312377)

SOEN 341 - Software Process, Fall 2026

CareerConnect - Job Search and Application Tracking Platform

Repository: <https://github.com/paulfusa/career-connect>

Prompt 1 - Define User Stories

- **Purpose of AI Use:** Brainstorming and requirements to start the project.
- **Date:** September 25, 2026
- **Validation:** I read through and found some User Stories were too broad, so I made adjustments to clarify with extra details.
- **Decision:** Partially Accepted.
- **Reflection:** AI helped give a starting point for the project.
- **Responsible Person:** Mohamad Alostta

Prompt

Suppose you are a software engineer and a member of a team. I want you to help us define requirements for a career platform. Generate user stories for an application called CareerConnect, other than those already present, but in the same format as those already present in:

<https://github.com/paulfusa/career-connect/tree/main>.

Response

Here are 8 user stories covering the core CareerConnect features. Each follows the Appendix B format, with acceptance criteria and a starting task breakdown you can turn into GitHub Issues in the same manner as the two previous prompts.

US-01: Managing User Profile

As a job seeker, I want to create and manage my profile, so that I can present my personal information, skills, and experience to potential employers.

Acceptance Criteria

- [] Users can create a profile after registering.
- [] Users can update their personal information.
- [] Users can view their profile information.
- [] Profile information is saved and associated with the correct user account.
- [] Users can manage their professional information through their profile.

Tasks

- Task 1.1: Design the profile data structure.
- Task 1.2: Implement profile creation functionality.
- Task 1.3: Implement profile update functionality.
- Task 1.4: Create the profile viewing interface.
- Task 1.5: Test profile management functionality.

Decision

Accepted and added as a GitHub Issue.

Validation

The team reviewed the AI-generated story against the CareerConnect project requirements and determined that it is a core feature to implement.

The story was reviewed for:

- Alignment with job seeker needs.
- Compatibility with other planned features such as resume management and applications.
- Clarity of acceptance criteria.
- Agile user story format.

We refined the wording before adding it to GitHub Issues.

US-02: Job Availability Status

As a job seeker, I want to know whether a job posting is currently accepting applications, so that I can focus on opportunities that are still available.

Acceptance Criteria

- ☐ Job postings display their current availability status.
- ☐ Users can identify whether applications are open or closed.
- ☐ Closed opportunities cannot receive new applications.

Tasks

- Task 2.1: Add application availability status to job postings.
- Task 2.2: Display status on job search results.
- Task 2.3: Prevent submissions for closed postings.

Decision

Not selected as a separate GitHub Issue.

Reason

The team decided this functionality could be included within job posting and job search features.

US-03: Recruiter Company Profile

As a recruiter, I want to create and manage a company profile, so that job seekers can learn more about the organization.

Acceptance Criteria

- ☐ Recruiters can create company information.
- ☐ Recruiters can update company details.

- ☐ Job seekers can view company information.

Tasks

- Task 3.1: Design company profile database structure.
- Task 3.2: Create company profile interface.
- Task 3.3: Display company information with job postings.

Decision

Not selected for Sprint 1.

Reason

The team prioritized core recruitment functionality before additional company features.

US-04: Company Reviews

As a job seeker, I want to view and submit company reviews, so that I can make more informed decisions about potential employers.

Acceptance Criteria

- ☐ Users can view company reviews.
- ☐ Users can submit reviews.
- ☐ Reviews are associated with companies.

Tasks

- Task 4.1: Create review data model.
- Task 4.2: Develop review submission page.
- Task 4.3: Display reviews on company profiles.

Decision

Not selected for Sprint 1.

Reason

The feature requires additional moderation and review management functionality.

US-05: Feature Suggestion System

As a CareerConnect user, I want to suggest improvements or new features, so that I can provide feedback and contribute to the platform's improvement.

Acceptance Criteria

- ☐ Users can submit feature suggestions.
- ☐ Suggestions contain a title and description.
- ☐ The development team can review submitted suggestions.

Tasks

- Task 5.1: Create feature suggestion form.
- Task 5.2: Store submitted suggestions.
- Task 5.3: Create review interface for suggestions.

Decision

Not selected for Sprint 1.

Reason

The team considered this useful for future improvements but not part of the initial core functionality.

US-06: Saved Job Organization

As a job seeker, I want to organize my saved job postings, so that I can easily return to opportunities that interest me.

Acceptance Criteria

- ☐ Users can save job postings.
- ☐ Users can view saved jobs.
- ☐ Users can remove saved jobs.

Tasks

- Task 6.1: Create saved jobs database structure.
- Task 6.2: Add save/remove functionality.
- Task 6.3: Create saved jobs page.

Decision

Not selected for Sprint 1.

Reason

The team prioritized basic job searching and applications first.

US-07: Interview Preparation Resources

As a job seeker, I want access to interview preparation resources, so that I can improve my preparation before interviews.

Acceptance Criteria

- ☐ Users can access interview preparation material.
- ☐ Resources are organized by category.
- ☐ Users can view recommended preparation content.

Tasks

- Task 7.1: Define preparation resource categories.
- Task 7.2: Create resource page.
- Task 7.3: Add resource management functionality.

Decision

Not selected for Sprint 1.

Reason

The feature was considered outside the initial CareerConnect scope.

US-08: Application Deadline Reminders

As a job seeker, I want to receive reminders about application deadlines, so that I do not miss important job opportunities.

Acceptance Criteria

- ☐ Users can see upcoming deadlines.
- ☐ Users can receive reminders.
- ☐ Users can manage notification preferences.

Tasks

- Task 8.1: Store application deadlines.
- Task 8.2: Implement reminder system.
- Task 8.3: Create notification settings.

Decision

Not selected for Sprint 1.

Reason

The team considered reminders as a future enhancement after completing core application tracking.

- The required Generative AI feature
- The team's original feature

Prompt 2 - Sprint 1 Progress Tracking and Organization

- **Tool:** Claude, used inside VS Code with access to our local copy of the repository.
- **Date:** September 27, 2026
- **Purpose of AI Use:** Monitoring task completion and brainstorming how to organize and proceed with the tasks of Sprint 1.
- **Chat Link or Prompt/Response:** Link not available (the app wasn't used). My prompts are listed in the appendix below.
- **AI-Suggested Content:** The AI compared the Sprint 1 requirements with our repository and GitHub issues to show what was complete and what was still missing. It then suggested how to organize each folder.
- **Validation:** I went through every file on GitHub and examined the validity and marked down each completion, leaving out the incomplete sections.
- **Decision:** I recreated the documents in my own understanding and completed the remaining files.
- **Reflection:** AI helped in speeding up the process of developing the planning, README, task monitoring, and task breakdown phases in an organized manner.
- **Responsible Person:** Mohamad Alost

Prompt

(My requests combined and reworded into one prompt. The original message is included below it.)

I have attached the SOEN 341 course outline and the Sprint 1 project instructions for CareerConnect. Compare the Sprint 1 requirements and rubric with the current state of our GitHub repository and issues. Tell me which deliverables are complete, which are partially complete, and which are still missing, and prioritize what is left based on the rubric weights. Then suggest how we should organize the repository folders so that each Sprint 1 deliverable has a clear place.

Original message: "read those two documents and analyze sprint 1" (Sprint 1 project PDF and course outline attached)

Response

Comparison of Sprint 1 requirements with the repository:

Rubric category (weight)	Status	Notes
Team members and repository setup (0.5)	Partial	Repo, members and AI_Log/ exist. No folder for meeting minutes.
README file (0.5)	Almost	Missing the GitHub repository link and complete setup instructions.

Feature identification and scope (1.0)	Mostly done	Generative AI feature not confirmed; original feature not clearly named.
User stories (3.0)	Partial	16 stories (minimum 15), but no separate "Team-Generated User Stories and Features" section.
Sprint planning (3.0)	Missing	Work plan in docs/sprints/sprint-1.md is empty: no priorities, risks, estimates or capacity.
Task breakdown (1.5)	Partial	Tasks exist in each issue, but most issues have no assignee and only one label is used.
AI usage log (2.0)	Weak	Logs must be PDFs in each member's folder. Some members have no log yet.
Contribution log (0.5)	Missing	No record of each member's contribution.
Meeting minutes (1.0)	Partial	Only the September 24 minutes exist.
Project demo (1.0)	Partial	Registration/login and onboarding are built.

The team process definition (workflow, branching, PR and code review process, Definition of Ready, Definition of Done) was also missing.

Suggested priority: sprint plan (3.0) → AI log PDFs (2.0) → team-generated stories and team process → issue assignees and labels → contribution log → README setup.

Suggested folder organization:

Folder	Contents
AI_Log/<Name>/	Each member's AI usage log PDF
docs/sprints/	Sprint plan, task breakdown, contribution log
docs/process/	Team process (workflow, branching, PRs, DoR, DoD)
docs/meeting-minutes/	Minutes of each meeting
docs/user-stories/	Team-generated user stories and features
docs/submissions/	Documents submitted for each sprint
