Project description

CareerConnect is a web application designed to connect job seekers and recruiters. It allows both to manage the hiring process in a single place. Job seekers will have the ability to create their own profile, manage their resumes, browse for job postings, save their favorite opportunities to dive into later, submit applications, follow the application's status, and more. Recruiters, on the other hand, will be able to publish openings, review applications, and update decision status and communicate outcomes with applicants.

The project aims to ease the application process organizing it and making it more transparent. Its proposed outcome-message feature tries to diminish the "ghosting" phenomenon that is practiced by many companies, and allows the applicants to receive genuine feedback and a way to improve. This provides clear and precise explanations to either move onto the next step of the process or to ameliorate their applications. The team will also implement generative AI features, and will define and document its usage throughout the developmental procedure.

Problem and Proposed Solution

Job seekers often try to get opportunities throughout websites, emails, and personal documents. This poses some difficulty in terms of organizing and remembering the status of each application. Recruiters also need a way to post openings and respond to applications.

CareerConnect aims to gather all this into one platform that tries to satisfy both user ends. In doing so, the hiring process will get easier as more features will be addressed in later stages.

Setup

Dependencies

- **Node.js:** v22 or higher
 - **pnpm:** v9 or higher
1. Clone the repository: `git clone https://github.com/paulfusa/career-connect.git`
 2. In Project Terminal, run `pnpm install` to install the Node dependencies,
 3. Duplicate the `.env.example` and rename to `.env`, and paste the required keys.

Run Dev

VS Code

- Go to **Run and Debug** and choose Web

Individual

- Start the Web Server `pnpm run dev`

Then open <http://localhost:5173> in your browser.

Testing

Run the automated tests with `pnpm test`.

Current Sprint 1 Scope

- US-01: Account registration
- US-02: Login and logout
- US-16: First-login onboarding
- US-04: Profile management

Planned Features

Job-seeker and account features:

- Account registration, email verification, login/logout.
- Job seeker profile creation and management.
- Resume upload and update/edit.
- Job search, monitoring job application status, and job acceptance rate.
- Job browsing filters and application submission.
- History tracking

Recruiter/Company Features:

- Recruiter company profiles and descriptions.
- Job posting creation and management.
- Application review and status updates.
- Company reviews that users can read and submit.

Additional Ideas:

- **Clear application outcomes:** Recruiters can send an offer with details on how to proceed or a rejection with a recruiter-made feedback on how to improve applications.
- **Feature suggestions:** Users can send feature suggestions to improve the workflow and provide benefits to explain to the team the reason for implementing them.

The generative AI feature being considered by the team: AI-assisted resume feedback that provides suggestion on how to improve resume's clarity and relevance. The team still has to review and confirm the chosen AI feature.

Technologies

The repository is set up with SvelteKit, Svelte, TypeScript, PostgreSQL, Drizzle ORM, Better Auth, and pnpm.

Appendix A - Sprint 1 Work Plan

Issue	Title	Type	Responsible	Target Date	Priority	Status
#61	GitHub setup, SvelteKit app, database connection	Task	Paul	Sep 21	High	Completed
#3	Update README with member names and IDs	Task	Paul	Sep 24	Medium	Completed
#7	Sprint 1 meeting minutes (Sept 24)	Task	Mohamad	Sep 25	Medium	Completed
#5	US-01: Account registration	User Story	Paul	Sep 27	High	Completed
#6	US-02: Login and logout	User Story	Paul	Sep 27	High	Completed
#29	US-16: First-login onboarding	User Story	Paul	Sep 27	Medium	Completed
#9	US-04: Profile Management	User Story	Paul	Sep 28	High	Completed
#70	Automated tests for registration, login and profile	Task	Paul	Sep 28	High	Completed
#8-#11	US-03 to US-06 (writing the user stories)	Task	Mohamad	Sep 26	High	Completed
#12-#14	US-07 to US-09 (writing the user stories)	Task	Maher	Sep 27	High	Completed
#15-#20	US-10 to US-15 (writing the user stories)	Task	Michael	Sep 27	High	Completed
#62	README: project description, problem, solution, features	Task	Mohamad	Sep 27	High	Completed
#63	README: setup instructions and repo link	Task	Paul and Mohamad	Sep 28	High	Completed
#64	Sprint 1 work plan, backlog, risks	Task	Mohamad	Sep 28	High	Completed
#65	Task breakdown	Task	Mohamad	Sep 27	High	Completed
#66	Contribution log	Task	Mohamad	Sep 28	High	Completed
#67	Team process (workflow, branching, PRs, DoR, DoD)	Task	Mohamad	Sep 27	High	Completed
#68	Team-generated user stories and features	Task	Everyone	Sep 28	High	Completed
#69	AI usage log PDF	Task	Everyone	Sep 28	High	Completed
#71	Sprint 1 submission document	Task	Mohamad	Sep 28	High	Completed
