

Prompt 1 - Generate an Additional User Story

Purpose of AI Use: Brainstorming an additional feature for CareerConnect.

Date: September 27, 2026

AI Tool: ChatGPT

AI-Suggested Content: Private application notes, including acceptance criteria and implementation tasks.

Validation: The AI assistant compared the suggestion with the repository's existing stories and logs. Private application notes were not found as a separate feature. Personal and team review are pending.

Decision: Proposed for the backlog; implementation sprint to be decided by the team.

Reflection: AI provided a structured starting point by turning a feature idea into a user story, acceptance criteria, and tasks. The team still needs to assess its usefulness and scope.

Responsible Person: Kimia Karimiyeganeh

Prompt

Suggest one additional user story for CareerConnect, a job-search and application-tracking platform. The idea should provide useful functionality beyond the stories already present in our repository. Follow our existing format: user story, suggested priority, acceptance criteria, and implementation tasks. Keep the feature manageable for a student project.

Response

Private Application Notes

Source: AI-generated

Priority: Medium — suggested

Sprint: To be decided

User Story

As a job seeker, I want to add private notes to my applications so that I can remember interview details, questions, and important information about each opportunity.

Acceptance Criteria

- ☐ A signed-in job seeker can add notes to an application they own.
- ☐ The user can view, edit, and delete their notes.
- ☐ Notes remain saved after refreshing the page or signing in again.
- ☐ Notes display their last-updated date.
- ☐ Recruiters and other users cannot access the notes.
- ☐ Empty notes or notes exceeding 2,000 characters are rejected with a clear message.

Tasks

Task 1.1: Create a notes table linked to the application and its owner.

Task 1.2: Implement adding, retrieving, editing, and deleting notes with ownership checks.

Task 1.3: Add a private-notes section to the application-details page.

Task 1.4: Validate note length and display helpful error messages.

Task 1.5: Test saving, editing, deletion, and protection against unauthorized access.
